

# Semi Automatic

THE PERFECT WRAPPING

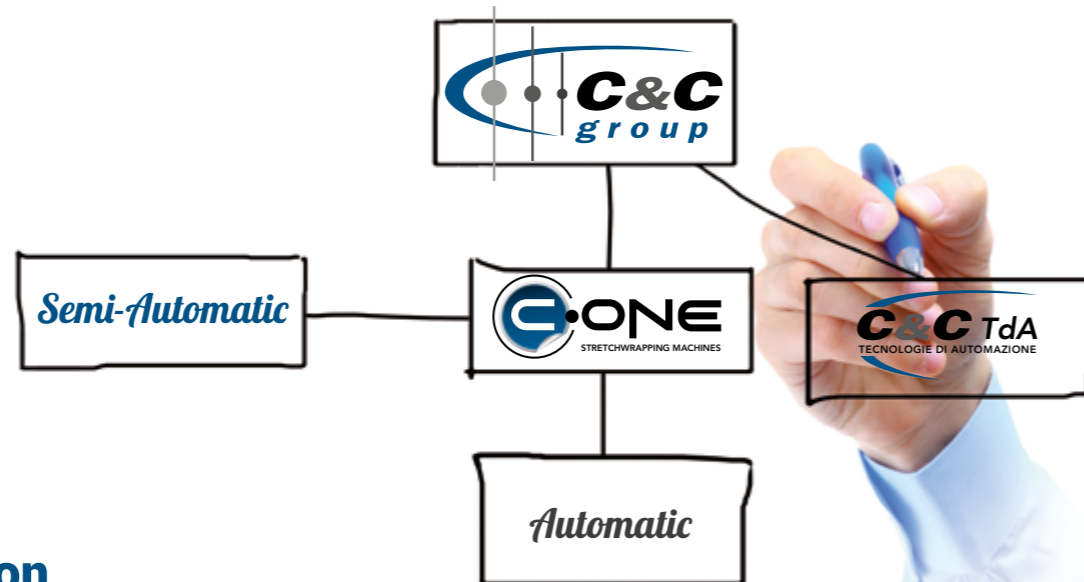

## Company

C-ONE IS A DIVISION OF C&C GROUP S.R.L., A COMPANY INVOLVED SINCE MORE THAN TWENTY YEARS IN THE PRODUCTION OF ELECTRIC CABINETS AND SOFTWARE FOR INDUSTRIAL AUTOMATION.

Working in this field, the company acquired a specific know-how in the end-line domain, especially in the automation of pallets wrapping machine. In 2003 it has been built a first prototype of semi-automatic pallet wrapper with cut & seal system (it is the idea of Super-plus model, that is still in our range), but only in 2005 C-One really became a manufacturer in all respects, introducing to the market C-One Base.

TODAY C-ONE CAN BOAST ONE OF THE WRAPPING MACHINES MOST COMPLETE RANGE ON THE MARKET, FROM THE LOW BUDGET TURNTABLE TO THE HIGH SPEED ROTATING ARM.

C-One machines are fully designed and built in Italy, in Emilia Romagna, a region that is famous all over the world for its know-how in the packaging industry, but 95% of sales go to foreign countries, that confirms the general appreciation for our machines quality and reliability: it is not a coincidence that we choose as our motto "THE PERFECT WRAPPING", that is both our engagement and our purpose.

## Mission

If we were a candies factory, we wouldn't say that we produce candies, we would say that our job is to make a child smiling. In the same way we see the manufacturing of our pallet wrappers: they have to give satisfaction to the customer.

He has to be satisfied by our answers before purchasing, he has to be satisfied by our solutions to his special needs, he has to be satisfied by our way to deal, he has to be satisfied by using the machine, he has to be satisfied by our after sales support.

THESE GOALS CAN BE ACHIEVED INVESTING IN THE QUALITY OF THE MACHINES WITH NEW IDEAS DEVELOPED AND CREATED WITH GREAT CARE TO DETAILS BY A TEAM CAPABLE TO LISTEN THE MARKET AND TO INTERPRET ITS TRENDS.

HERE IS OUR WAY TO "THE PERFECT WRAPPING", AN ATTITUDE THAT MEANS PASSION AND CREATIVITY TO US AND DIRECTS OUR EFFORTS TO GIVE OUR CUSTOMERS THE BEST POSSIBLE RESULTS.

## Semi-Automatic

### 1 C-ONE TIRO

A pallet wrapper for everybody.

### 2 C-ONE CRESCO

It is a small machine, but it can do a big job!

### 3 C-ONE BASE

The main advantage of this machine is to offer top-level functions and features at a great price.

### 4 C-ONE BIFORIS

Thanks to the shape of the turntable, C-One Biforis allows table loading without using an access ramp.

### 5 C-ONE PLANA

A very strong driving system, a 1.500 Kg max payload, everything in just 18 mm.

### 6 C-ONE PLUS

A semi-automatic, exceptionally sturdy and versatile model controlled by a PLC which allows virtually countless customization possibilities.

### 7 C-ONE SUPERPLUS

In C-One Division there is a synergy of design ability and extensive experience around wrapping machines business.

### 8 C-ONE EVOLVO

All the advantages of a rotating arm stretch wrapping machine in a very low price.

### 9 C-ONE VERTEX

The rotating arm pallet wrapper to work 24 hour per day for many years!

### 10 C-ONE EVOLVO SP

To be competitive working times reduction is a must: even small, but repetitive, savings can be an important key to success. The cutting and sealing system improves packing time and quality.

### 11 C-ONE VERTEX SP

The machine that reduces accidents and improves productivity.

### 12 C-ONE MOTUS

A rotating arm that is also a portable wrapper: a flexible solution that allows you to wrap where you need to wrap.

### 13 C-ONE CINGO

A small but effective workmate.

### 14 C-ONE VIVERRA

A clever wrapper always at your side.

## 1 C-ONE TIRO

**Inexpensive  
User-Friendly Control Panel  
All Basic Functions Included**

**A pallet wrapper for everybody.**

Workers of the world, unite! You have been told for years that a pallet wrapper is too expensive and you have to wrap a pallet by hand? Now the price can't be an alibi anymore, C-One Tiro arrived to prevent all people from turning around a pallet. Its small price make it affordable even for micro and small productions, its features make it a good choice even for medium ones. Its user-friendly control panel allows the operator to save up to 3 programs and set bottom wraps, top wraps, rotation speed, carriage speed up, carriage speed down and photocell delay. C-One Tiro has been designed thinking to usability and effectiveness, reducing the parts that could break down, to give years of reliable working. C-One Tiro: simplicity in power!

**Low Cost  
Semiautomatic  
Easy To Use**

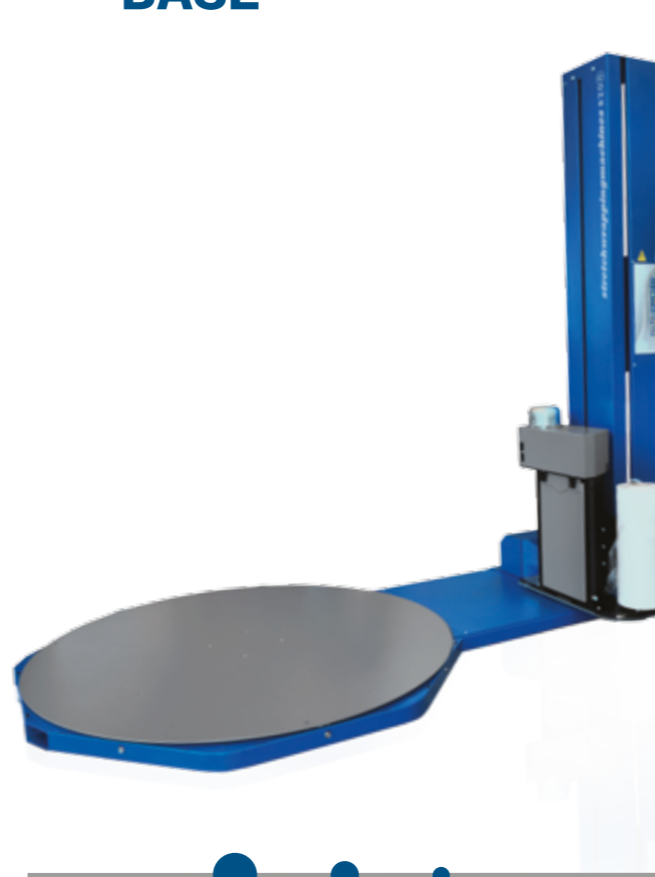

**It is a small machine, but it can do a big job!**

In creating Cresco, the C-One team looked at the essential points. Cresco has only what it is really needed for a good wrapping machine: inverter for the turntable, inverter for the carriage, film stretching adjustment, pallet height sensor, bottom and top turns adjustment, zero position stop, three working cycles (up & down, only up, top-sheet), two working modes. 6 programs can be saved by the customer, including a completely customized cycle thanks to the "Playback" mode. Even the structure is the result of a simplification process. Cresco is simply the core of what you need: a stretch wrapping machine. That's it!

## 2 C-ONE CRESCO

## 3 C-ONE BASE

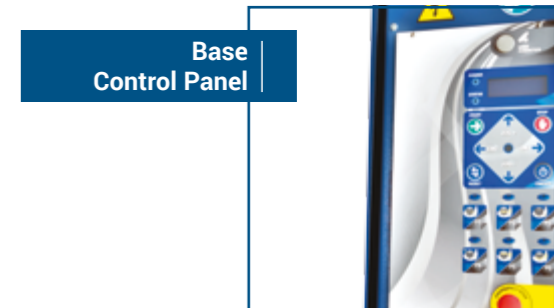

**Full Set Of Functions And Options  
Power Pre-Stretch Carriage  
Great Value For Money**

**The main advantage of this machine is to offer top-level functions and features at a great price.**

It has everything is needed: inverter for rotation motor, inverter for carriage motor, carriage with electro-magnetical clutch or power pre-stretch system, a wide range of options and programmes to meet every requirement. In the design process every detail has been carefully conceived to be rational: weight, dimensions, materials, electronics, wiring, assembly and transport.

The result is C-One Base: those who believe that low prices and quality can not be found in the same machine will be proven wrong.

**Ramp Not Needed  
Complete Set Of Features And Options  
"Save Your Time" System,  
With Remote Control**

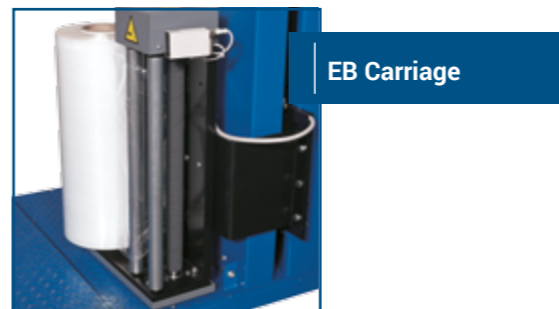

**Thanks to the shape of the turntable, C-One Biforis allows table loading without using an access ramp.**

It is possible to access with hand pallet truck from the front or from one of the two sides.

The mechanics and electronics are the same as C-One Base, reaching also the same great reliability.

C-One Biforis can be completed with many options to fit all customer needs.

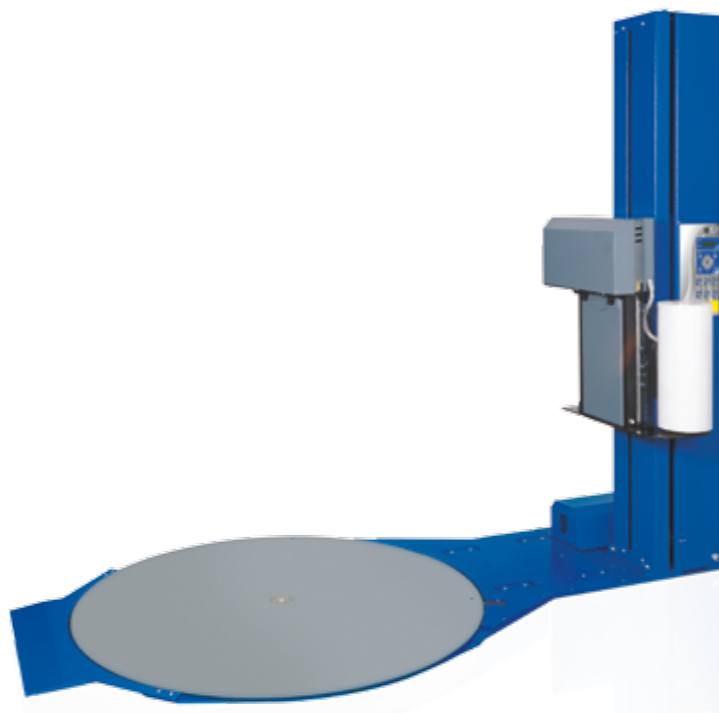

It is ideal for those who have reduced space, unstable loads, or customers who use hand pallet truck.

## 4 C-ONE BIFORIS

## 5 C-ONE PLANA

Space Saving  
No Strain With Hand Pallet Truck  
No Forks Length Problems With Electrical Pallet Truck

A very strong driving system, a 1.500 kg max payload, everything in just 18 mm.

Ladies and gentlemen here is a record-breaker: at a height of only 18 mm, the C-One Plana is the lowest turntable in the world! Thanks to its reduced height, the ramp is only 20 cm long, therefore loading is easier and safer. Trip or fall risks are minimised with no need for speed to help loading pallet. The turntable is so low it will not be damaged by the forks on forklifts and also any length of fork can be used. Offering 1.5m2 space saving due to no requirement for ramp. C-One Plana starts a new era in pallet wrapping!

PLC Controlled  
Operator Panel  
Sturdiness

A semi-automatic, exceptionally sturdy and versatile model controlled by a PLC which allows virtually countless customization possibilities.

It is equipped with an inverter for the turntable and a photocell to detect the pallet height. It is possible to adjust separately the ascent and descent speed of the carriage. Parameters and cycles are easy to set, thanks to the user-friendly operator panel. The standard model features all these characteristics, so C-One Plus is often regarded as the perfect partner for peculiar needs. It is a semi-automatic machine indeed, but a luxury one!

## C-ONE PLUS 6

## 7 C-ONE SUPERPLUS

Automatic Cut & Seal  
Device To Eliminate The "Film Tail"  
"Don't Get Off" System

In C-One Division there is a synergy of design ability and extensive experience around wrapping machines business.

C-One Superplus is a fully automatic low profile turntable machine, with four original solutions: automatic film clamping system; automatic film cutting; film sealing system; "tail" elimination device. Along with an infrared/radio remote control, these four systems allow the operator to be free from all manual work, increasing safety, improving packaging quality and saving time. Automatic, practical, robust, simple: C-One Superplus is the right solution even for the most demanding customers.

Power Pre-Stretch  
Very Light Stretch For Unstable Pallet  
Low Price

All the advantages of a rotating arm stretch wrapping machine in a very low price.

The rotating arm wrapping machine is the perfect solution for heavy or unstable pallets. C-One Evolvo has been designed to offer in a very low price all the advantages of a rotating arm stretch wrapping machine. Design simplicity doesn't have to mislead about the features of this pallet wrapper: frequency controller for every motor, standard power pre-stretch, maximum speed 18 RPM. C-One Evolvo can be mounted on wall or on foot. The film tension can be very light and this is really important when pallets are unstable: C-One Evolvo can really wrap even air!

## C-ONE EVOLVO 8

## 9 C-ONE VERTEX

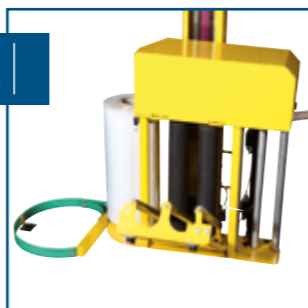

Toughness  
Endless Setting Possibilities  
Instantaneous Safety Stop

The rotating arm pallet wrapper to work 24 hours per day for many years!

This machine was born as an automatic machine and thanks to its origin it is provided of great aptitude to continuous work at automatic production line rate. Its derivation can be easily noticed looking at machine frame that is impressive. For the rotation, it has been built a mechanism that allows to bear the arm imbalance even at high rotation speed. In addition it has been designed an easy and fast installation system.

When working, C-One Vertex reveals all its qualities: light with unstable pallets, strong with heavy pallets. It is the best solution for those ones that have to wrap many pallets, work with very unstable pallets or who have extremely heavy loads.

Power Pre-Stretch Carriage

Automatic Cutting And Sealing System  
"Film Tail" Elimination Device  
"Don't Get Off" System With Remote Control

To be competitive working times reduction is a must: even small, but repetitive, savings can be an important key to success. The cutting and sealing system improves packing time and quality.

C-One Evolvo SP maintains characteristics and qualities of C-One Evolvo, but thanks to the "don't get off" system the operator does not have to get off the forklift to tie the film to the pallet at the beginning of cycle or to cut it at the end. At least 30 seconds can be saved for each pallet, it means a working month every 20.000 pallets! Moreover, in this way, even accidents risk is reduced, avoiding to get up and down the forklift and back pains to tie and cut the film.

Power Pre-Stretch With Load Cell

## C-ONE EVOLVO SP 10

## 11 C-ONE VERTEX SP

"Don't Get Off" System With Remote Control  
Perfect For High Outputs  
Cycle With Roped Film

The machine that reduces accidents and improves productivity.

C-One Vertex SP maintains characteristics and qualities of C-One Vertex, but thanks to the "don't get off" system, it works by itself: the operator brings the pallet that has to be wrapped under the machine and, without getting off the forklift, starts the wrapping cycle with a remote control. The operator does not have to get off the forklift to tie the film to the pallet at the beginning of cycle or to cut it at the end. This brings a time reduction and a decrease of injure risks. The pre-stretch carriage is supplied with a roping system, in order to make a film band or a film rope. These cycles can be used to get a very strong tightness on heavy pallets. C-One Vertex SP is the best solution for very light and very heavy pallets and for high outputs.

Slewing Bearing

Portable Version: Reduced Wrapping Area  
Portable Version: Wrapper Goes To The Pallet  
Fixed Version: great Value For Money

A rotating arm that is also a portable wrapper: a flexible solution that allows you to wrap where you need to wrap.

A new family of rotating arms that delivers plenty of solutions. C-One Motus is available in 3 versions: 1) EPT to work in combination with an electrical pallet truck which it is fixed to. It is powered by the electrical pallet truck battery, in this way there will be 2 machines in 1, a pallet truck that is still a pallet truck but also a pallet wrapper 2) HPJ to be transported thanks to its wheels and steering. It has its own battery so it can be taken to any area wrapping is required 3) FIX to be bolted to the floor or including stabilizing mass if you plan to change its position. It is powered by a normal 230VAC power supply. C-One Motus EPT and HPJ have the exclusive yo-yo system, that allows perfect wrapping of the wooden pallet despite the forks of the pallet truck. C-One Motus offers the advantages of a rotating arm and a mobile wrapper, all in one!

Yo-Yo System

## C-ONE MOTUS 12

## 13 C-ONE CINGO

Great value for money  
Only steel, no plastic.  
Compact size

A small but effective workmate

C-One Cingo is a precious ally in solving logistic problems: if you can't move a pallet to a pallet wrapper, then you can move the pallet wrapper to a pallet. C-One Cingo is easy to drive and its battery allows a big autonomy. Its compact size allows the wrapping of a pallet in a reduced area. Despite it is the entry level model in our range of mobile wrappers, it has many functions that make it suitable for almost all needs. Following the idea of a "no-frills" machine, C-One has been built without plastic covers, only steel. Maybe the look has been penalized by this decision, but customers will appreciate its sturdiness

Completely  
Steel Made

Big autonomy  
Full set of function  
Easy to drive

A clever wrapper always at your side

Viverra is a latin word that means ferret, a mammal famous to be very quick and lively. This is the way we think about C-One Viverra: a quick and always ready machine that can actively improve the packaging process of its owner. Thanks to its big autonomy, it is a perfect machine to deal with big workloads, while the many features of its software allows a plenty of solution for all wrapping needs. C-One Viverra driving system makes this machine very stable and easy to move. Despite its dimensions the area which is necessary for wrapping cycle is quite small. C-One Viverra is a perfect candidate to be your next "pet".

## C-ONE VIVERRA 14

Touch Screen

"THE PERFECT WRAPPING" AS PHILOSOPHY OF QUALITY. THANKS TO THIS SIMPLE PRINCIPLE C-ONE OBTAINED IN 2004 - IN THE VERY FIRST YEAR OF ITS ACTIVITY - THE QUALITY SYSTEM CERTIFICATION IN COMPLIANCE WITH THE REQUIREMENTS OF THE UNI EN ISO 9001:2000.

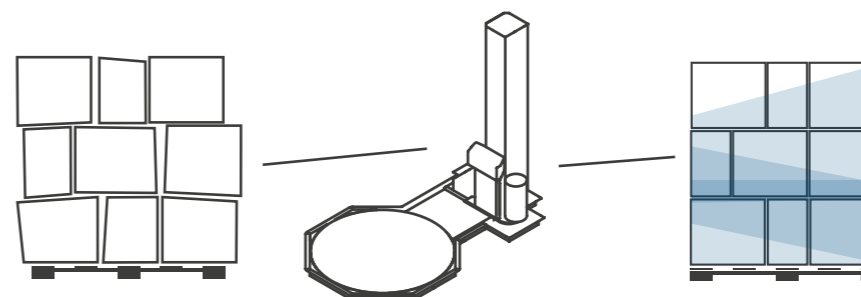

IN MAY 2009 C-ONE UPDATED ITS QUALITY SYSTEM TO THE STANDARD UNI EN ISO 9001:2008.

OUR CUSTOMERS ARE SURE TO PURCHASE A RELIABLE, WELL BUILT PRODUCT.

FOR US QUALITY IS THE CONSTANT EFFORT OF IMPROVING OUR PRODUCTS AND SERVICES.

UNI EN ISO 9001:2008
